

$n_1, n_2 = \# \text{ of filters}$

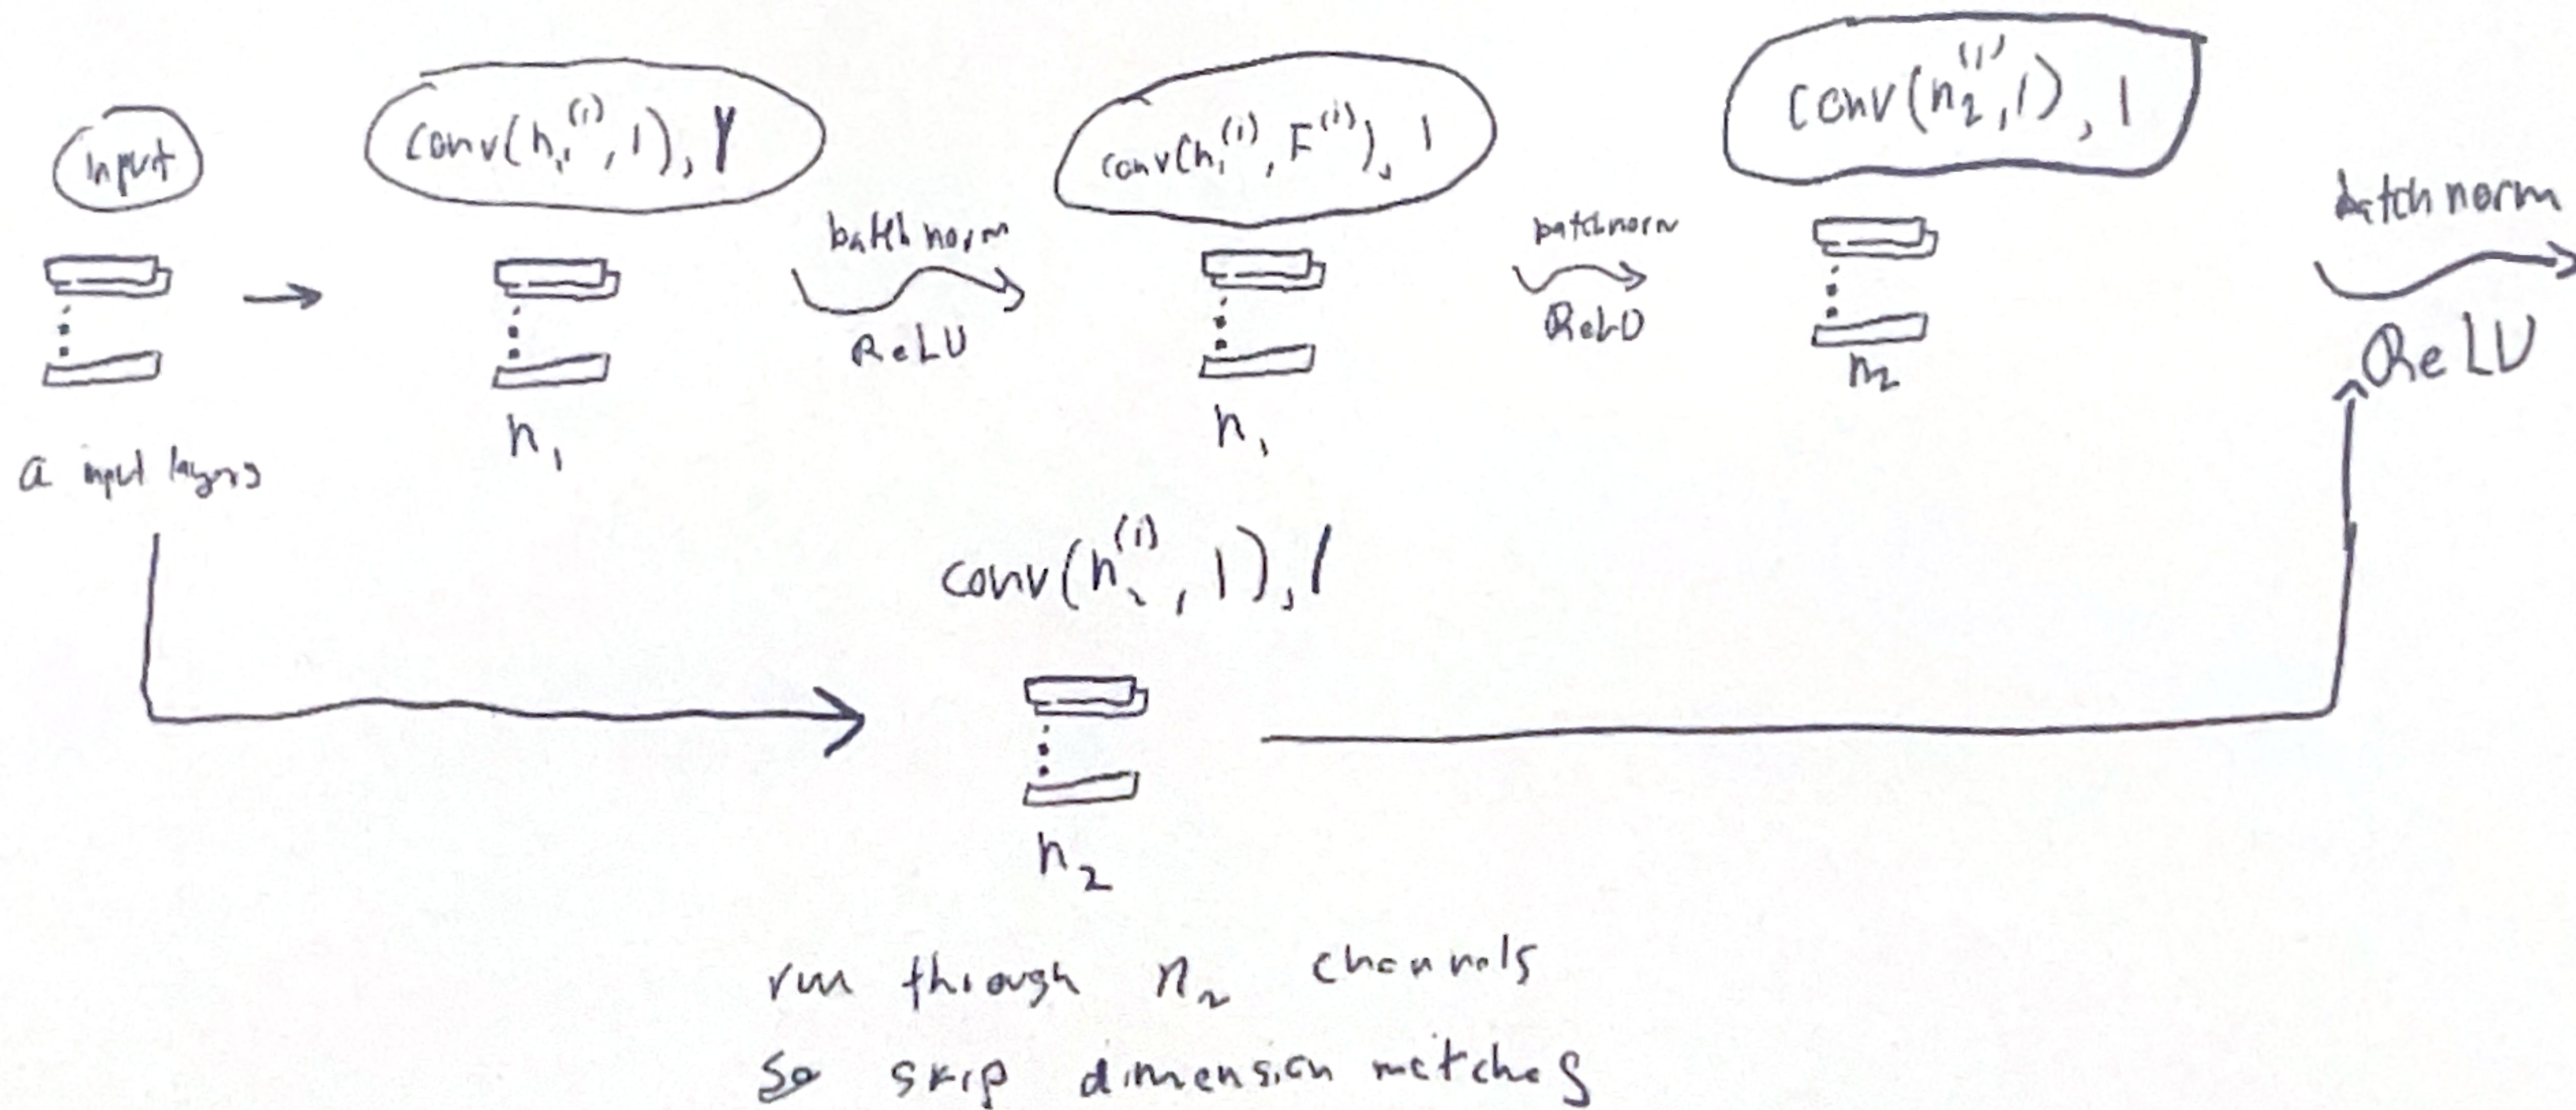

$F = \text{size of filters}$

$s = \text{stride}$

convolutional block

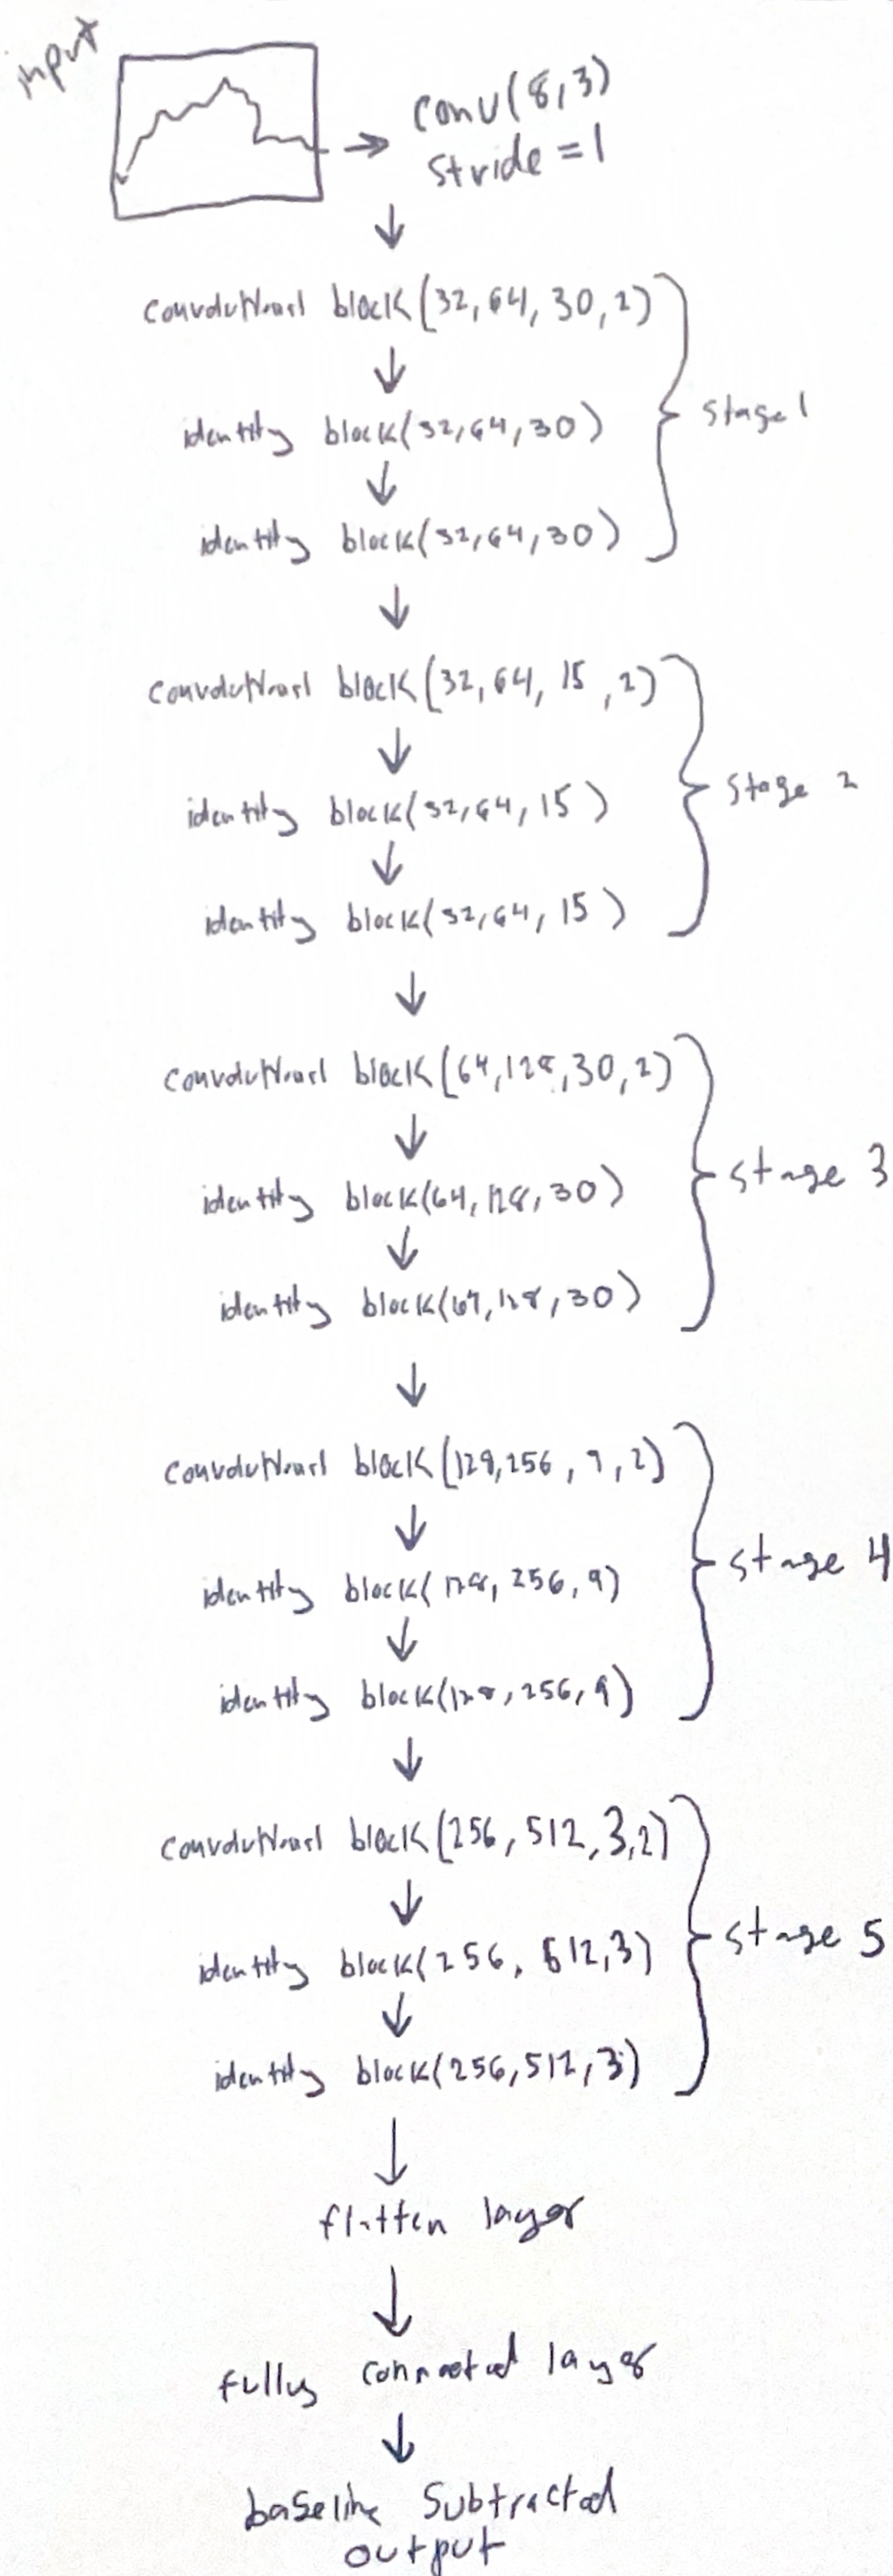

identity block

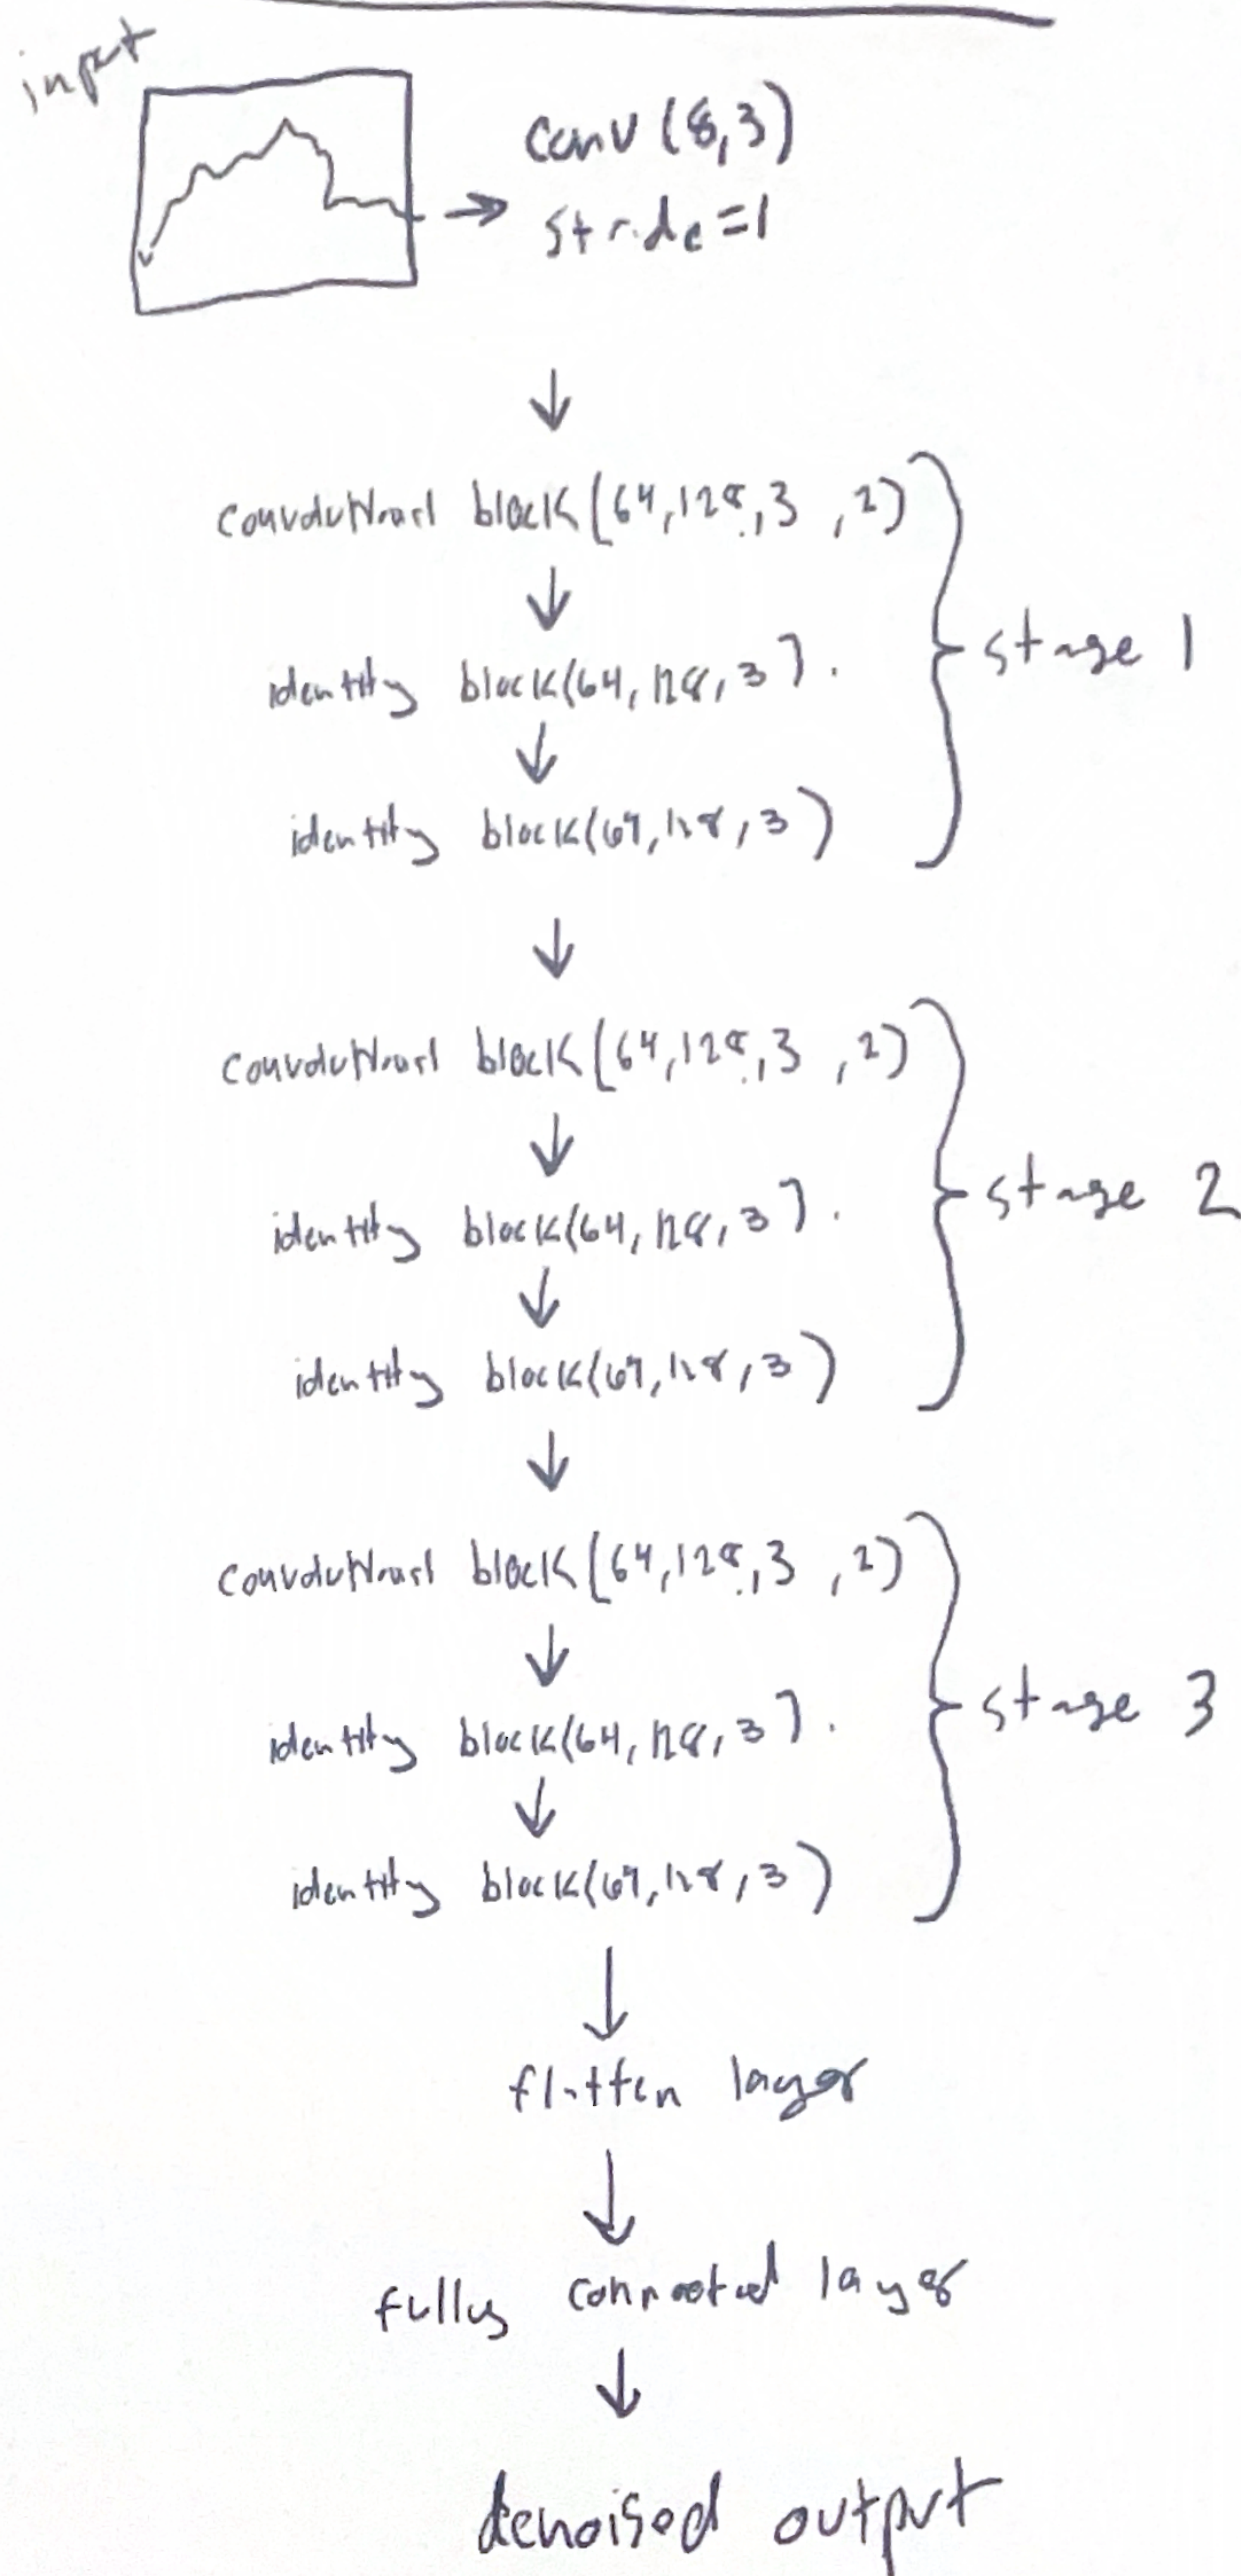

Notation: convolutional block (n_1, n_2, F, s)

Identity block (n_1, n_2, F)

Baseline correction architecture

Denoising Architecture

each → implies

batch norm and ReLU

latent layer has
same # of outputs
raw spectra!!!

↓
baseline subtracted
output

latent layer has
same # of outputs
as raw spectra!!!

Dual Supervised Network
